

Pro AV Design Services for Integrators and Solution Providers

Free network design services and installation support

NETGEAR
BUSINESS

NETGEAR now offers design services to support partners as they design and deploy professional audio and video solutions which require IP networking infrastructure.

This dedicated Pro AV Engineering Services team of experts has been conceived to empower those who are designing and installing AV over IP systems by providing free network design assistance, training, and installation support. From pre-sales and post-sales support to technical training, to white papers and best practices, these services are positioned to help educate tech managers and integrators to become masters of AV deployments which require IP networking.

NETGEAR has reshaped the organization to address the specific needs of both enterprise and residential AV systems integrators. In order to streamline the adoption of AV over IP and to ensure the successful transition from legacy matrix switching to AV over ethernet, residential and business integrators depend on a solid partner to guide the way. NETGEAR is determined to be this partner. This new structure for NETGEAR is essentially a design center with a number of the company's top networking professionals who are accomplished at documenting, drawing, and producing AV architectures.

"This technology transition to AV over IP is an exciting new space where NETGEAR is driving the integration. We are in the market to simplify and streamline IP networking for small and medium partners who don't have the resources, the budget, or the right IT teams to leverage more complex AV installations."

Laurent Masia, director of product line management for NETGEAR

24/7 pre-sales services by knowledgeable Pro AV technical networking experts

Consistent, reliable and effective Pro AV pre and post-sales support

Technical training for installers and integrators

Product training on demand

Configuration guides and coaching
